

Household water use guide

Each one of us should adhere to water restriction limits during the drought crisis.

See level 6B water restrictions guidelines ([English](#) | [Afrikaans](#) | [isiXhosa](#)) as well as an overview ([English](#) | [Afrikaans](#) | [isiXhosa](#)).

[Day zero](#) is fast approaching as many households are still using too much water. The daily limit of 50 litres per person per day is across home, work, school, gym or elsewhere.

Your household usage should be lower than the maximum indicated in the tables below.

Maximum household usage guide		
Number of occupants	Litres per day	Approx. litres per month per household
1	50	1 500
2	100	3 000
3	150	4 500
4	200	6 000
5	250	7 500
6	300	9 000
7	350	10 500
8	400	12 000

Keep in mind that your water usage is affected by leaks on the property that you may be unaware of.

Check and fix all leaks on your property ([English](#) | [Afrikaans](#) | [isiXhosa](#))

CITY CONNECT

If you have more than four people living on your property, you need to [apply to increase your water quota](#). If you don't, you could face hefty fines and have a water management device fitted at your own cost.
